

# CELEBRATING EARTH DAY 2026

In recognition of Earth Day 2026, we aim to raise awareness about environmental protection and promote practical actions that contribute to the preservation of our planet.

At 11 York Street, we have established strong procedures concerning plant equipment and energy efficiency, which are vital for managing our overall energy consumption. In addition to these initiatives, small daily actions from each of us can significantly bolster our sustainability efforts.

## OUR 2026 COMMITMENT

**A 100% green electricity contract** means your energy supplier matches your consumption with renewable sources like wind, solar, or hydro. While all electricity feeds into the same national grid, your contract supports the growth of clean energy.

**Planting a Forest:** Our carbon saving is equivalent to planting approximately 700-800 mature trees per year.

### COFFEE POD RECYCLING

We will be recycling all coffee pods from our communal coffee machine within reception and the rooftop meeting room. Our service partner Lyreco will be recycling our Nespresso pods, and accepting all brands of coffee pods from our occupiers that wish to reduce general waste and improve recycling.

**Coffee pods should not be placed in general waste recycling.**

We're encouraging our 11 York Street occupiers to ensure all used coffee pods are disposed of correctly. If your office area does not currently have suitable recycling facilities, please speak with your 11 York Street reception team for support.

**160 MILLION CUPS  
OF COFFEE ARE  
CONSUMED IN  
OFFICES WEEKLY  
IN THE UK**
